More Troubled

Globalization's onset of the crisis in the stock markets ten years ago, in July 1997, with the days all of the region's emerging markets were affected, although the crisis remained relatively untouched. The crisis was precipitated when the Bank of Thailand ran out of foreign exchange and could not withstand the subsequent run on its currency. Thai banks and companies were heavily indebted to foreign banks, especially those in the U.S., while institutional fund managers from the developed world had invested billions of dollars in the stock markets of the booming Southeast Asian economies. When the crunch came, those investors rushed for the exit, selling local stocks and currencies, disregarding the countries' fundamentals. The sudden withdrawal of liquidity from the region's stock markets broke the central banks of Thailand, Indonesia, Malaysia and South Korea.

Drawing on its experience in Latin America, the IMF imposed remedies that many critics believe made the situation worse. Many Asian banks went belly-up, and many companies were bankrupted.

While many Asian countries incurred large current account deficits in 1996, ten years later they had substantial current account surpluses, as well as ample foreign currency reserves.

When New York's stock market was sold down in July and August, the contagion spread immediately to Europe and Japan and then to emerging Asia. The subprime mortgage loans at the root of this were a U.S. problem, but they had been passed on through CDOs

El poder de la globalización fue demostrado primero en los mercados de valores hace diez años, en julio 1997, con el comienzo de la crisis financiera asiática. Dentro de días todos los mercados emergentes de la región fueron afectados, aunque el desarrollara los mercados de mundo quedado relativamente no tocado. La crisis fue precipitada cuando el Banco de Tailandia se quedó sin las divisas y no podría resistir al subsiguiente corre en su moneda. Cuándo el crujido vino, esos inversionistas se apresuraron para la salida, vendiendo acciones y monedas locales, desatendiendo los

fundamentos de países. La retirada repentina de liquidez de los mercados de valores de la región rompió los bancos centrales de Tailandia, Indonesia, Malasia y Corea del Sur.

Utilizando su experiencia en Iberoamérica, el FMI impuso los remedios que muchos críticos creen hicieron la situación peor. Muchos bancos asiáticos fueron vientre-arriba, y muchas compañías fueron hechas quebrar.

Mientras muchos países asiáticos contrajeron los déficit actuales grandes de cuenta en 1996, diez años luego ellos tuvieron los superávit
